Portfolio Specification

Data Science & Machine Learning 1 – Software Development Year 4

Author: Mark Lambert
Lecturer: Dr. Ben O'Shaugnessey
Student ID: C00192497
Submission Date: 9th October 2026

1. Overview and Background

In Semester 1 of Year 3 we were taught Python, in parallel with coursework I built a Last.Fm scrobbling application that connects with the Last.Fm API to track my music listening in order to step away from Spotify and subscription streaming services. I deployed the application to pythonanywhere, as shown in our Python Web Dev classes.

A year has passed, and as such I now have a year's worth of data that would allow me to personally connect with my portfolio. Figure 1 shows just under 18,000 entries.

Figure 1: 17,927 data points tracking my music listening over the last 365 days

1.1 Dataset

- **Source:** Data can be pulled from the Last.Fm API. The endpoint of focus for this portfolio is `user.getRecentTracks`, which returns a users own scrobble history and `user.getLovedTracks`, which will be joined onto the scrobble data as a binary field.
- **Size:** ~18,000 timestamped scrobbles collected personally via API key
- **Fields:** artist, album, song, timestamp, is_loved | Processing scrobbles into daily and monthly counts for modelling

The Data as a raw format once fetched from the API can be seen in Figure 2.

Figure 2: Raw data response from API

The details regarding each artist, album and date are all hashed with an embedded #text attribute, which is detailed in the Unofficial Last.Fm API docs [2]. The goal is to filter the data to a readable format, with dates, timestamps and the date + time in a readable format.

2. Technologies

- **Language:** Python
- **Data Science & ML libraries:** pandas, scikit-learn
- **Visualisation:** matplotlib
- **Environment:** Jupyter Notebook
- **Other Libraries:** Python's requests module for connecting with Last.Fm API
- **External Tools:** Last.Fm API for data collection
- **Version Control:** GitHub

3. Questions to Explore

- **Linear Regression:** Look at the trend of scrobbles over the last year
- **TBD**
